

SHOWCASE

Acura – USA

For the International Auto Show in New York, Acura, a Japanese automaker that produces luxury performance cars, presented its latest automotive design and engineering developments in a prominent booth.

A 36sqft/12m² wall, consisting of Tile 64PXL Wash panels were installed by XL Video behind a custom-built metal mask. The panels, which are controlled by Traxon Lighting Management System, display a range of mesmerizing color shades which have a stunning effect behind the custom-built steel cutouts. The futuristic design of the booth served as the perfect setting for Acura' s latest innovations and was a definite eye-catcher at all the auto shows where it was mounted.
